DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-3,5-7,9,15 and 16 are rejected under 35 U.S.C. 102(a) as being anticipated by Yamamoto et al. This reference discloses in col.1, lines 5-10, col.3, lines 50-55, col.5, lines 15-30 and col.11, lines 1-55 a method of coating a substrate by mixing a liquid and a gas, passing the mixture through a nozzle to generate clusters of atoms and molecules and directing them to a substrate as claimed. It is the examiner's opinion that the method of the reference anticipates the claimed process.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4,10,17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto et al for the same reasons as urged in the above paragraph. It is the examiner's opinion that the limitations of these dependent claims are conventional and do not render these claims unobvious. See Nogami et al Example

11 for Tetraisopropoxytitanium used as coating material. See Ito et al for ionizing a cluster of atoms and molecules and providing a potential for accelerating the ionized cluster and for the use of a reactive gas in the formation of coatings.

Claims 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto et al for the same reasons as urged in the above paragraph in view of Ito et al for the same reasons as urged above. The Primary reference fails in anticipation of these claims in that it does not disclose the use of a reactive gas. It is the examiner's opinion that it would have been obvious for one having ordinary skill in this art at the time the invention was made to use a reactive gas in the system of the primary reference since it is an established practice in forming compounds in the cluster art of thin film formation.
